BUILDING THE FUTURE 4U

Why Exhibit?

- Build4U stands out as the only exhibition in Türkiye that covers building technologies, materials, and systems end-to-end.
- Participating in the exhibition offers a chance for direct contact with potential customers, to introduce your products and services, and to make sale.
- New business connections can be established during the exhibition.
- Build4U provides a vision to understand the general situation of the industry and a point of view to analyze the competitors. In this way market trends, customer demands, and competitiveness can be understood better.
- Securing your space at Build4U increases brand awareness. In particular, the brand's visibility and reputation increase in the industry, thanks to the exhibition's wide participant base that is sensitive to the environment, technology, and sustainability.
- You can get direct feedback from visitors while promoting your products and services. This feedback provides important data in the process of developing your products and services.
- Build4U provides knowledge about sustainability and environmentally friendly solutions and offers the opportunity to learn the best practices and innovations in the sector. This will also help your company to adopt environmentally friendly policies.
- Thanks to the seminars, conferences, and panels organized within the scope of the exhibition, the latest information and trends in the sector can be followed and valuable information from experts can be gained.

BUILDING THE FUTURE 4U

About

Build4U, which will be held at ANFAŞ Expo Center in Antalya, the tourism capital of Türkiye, will host sustainable, earthquake-resistant, smart, and green building technologies, materials, and systems in line with the city's "smart city" vision.

The exhibition, which will be held in a total of 3 halls on a net area of 10,000 sqm, will cover all sector trends 360°.

Antalya, one of the three exemplary cities supported by the European Union within the scope of the "MatchUp Project", is also within the scope of the "World Bank's Green and Future Cities Project". Therefore, it has an international vision and development potential that perfectly matches the theme and scope of the exhibition.

Türkiye, as an earthquake country, has entered a period in which many urban transformation projects will be implemented. In this sense, the exhibition will play a key role in the construction of the smart cities of the future as the focus of building technologies, materials, and systems at the center of urban transformation and sustainable cities.

Visitor Profile

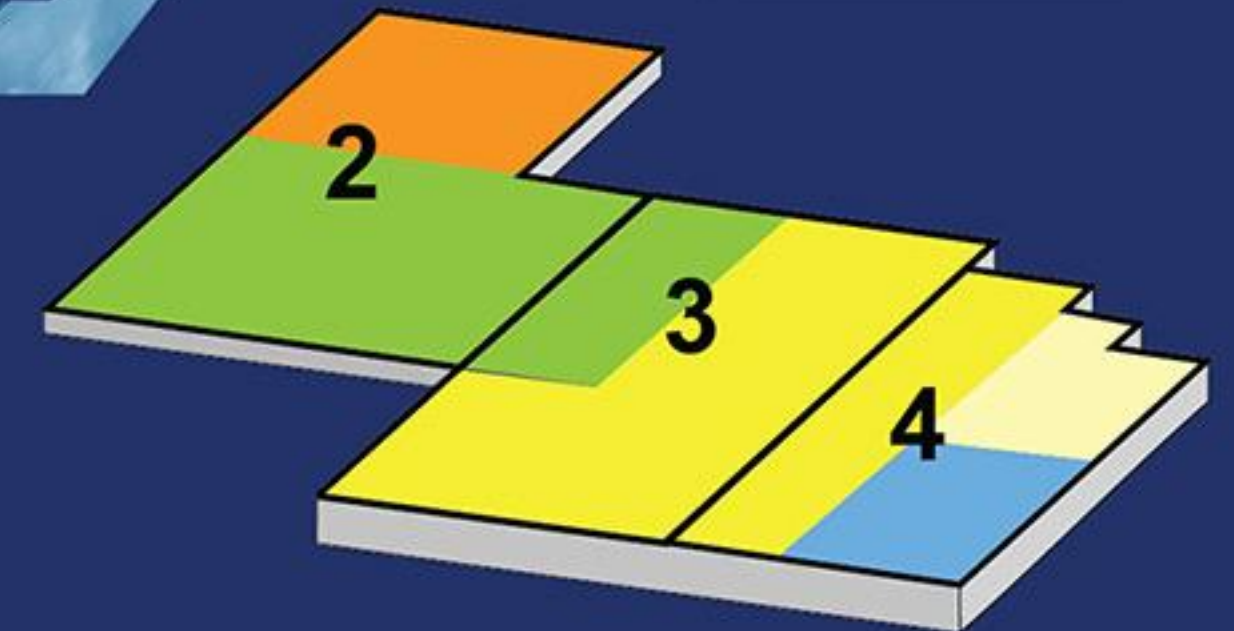

- Public facilities
- Healthcare: Hospital / welfare facilities
- Factories
- Hospitality: Hotels / restaurants
- Office buildings
- Shopping centers / department stores
- Trade associations
- Statutory boards
- Media
- Building owners
- Government
- Municipalities / local governments
- Security services
- Disaster management
- General contractors / Subcontractors
- Mail-order companies
- Building management companies
- Housing manufacturers
- Building constructors
- Real estate investors
- Architect offices
- Design and project companies
- Wholesalers
- Retailers / E-tailers
- Corporate users
- Distributors / Agents

Main Themes

- Smart Building Technology and Systems
- Smart Cities
- Energy, Energy Efficiency and Sustainability
- Green Building, Waste Management and Recycling Technologies
- Earthquake Resistant Building Technologies
- Prefabricated and Modular Building Technologies
- Building Materials and Systems
- Facility Management
- Start-Ups
